Cloud Function Call Test (From Local JSON File)

This page demonstrates a complete flow: Load local JSON data → Transform data format → Call cloud function → Display result.

1. Data to Send

The following data was loaded from `src/assets/json/authors.json` and transformed into the format required by the API. It will be sent as the request body.

```
{  "data_source": "json client from local authors.json",  "books": [    {      "title": "Pride and Prejudice",      "year": 1813,      "authorname": "Jane Austen"    },  ]}
```

2. Call Cloud Function

Send data to cloud function

3. Cloud Function Response

Request Successfull

Total calculated by cloud function: 6

Cloud function message: 云函数成功处理请求！ 计算出的书籍总数为 6 本。 -
